

# Package deployment

The screenshot shows the 'Vue XMPP des machines' interface. On the left is a sidebar with navigation options like 'Tous les ordinateurs gpi', 'Groupes favoris', and 'Ajouter un groupe'. The main area has a title 'Vue XMPP des machines' and radio buttons for 'Tous les ordinateurs', 'Ordinateurs en ligne', and 'Ordinateurs hors ligne'. Below this is a search bar with 'Toutes mes entités' and 'search all fields' dropdowns, and a 'Rechercher' button. A table below shows two workstations:

Nom de la Machine	Description	Système d'exploitation	Type	Dernier Utilisateur	Entité	Actions
wva-win-1		Microsoft Windows 10 Pro	QEMU	user	Siveo Medulla	[Icons for actions]
wva-win-2		Microsoft Windows 10 Pro	QEMU	user	Siveo Medulla	[Icons for actions]

Here we will deploy the package created earlier.

Go to the **Computer** view **and** select a workstation. Click the deployment button:

**Software Deployment** - Remote software installation or update.

Find the new package you created earlier in the package list and click the instant deployment icon:

The screenshot shows a table of packages with the following data:

Package	Description	Version	Taille du package	Actions
Notepad++		1	22.5 kOctets	[Instant deployment icon]

**Run Action** - Deploys the package to the previously selected workstation.

Go to the **"Audit"** view; a new row will appear.

A new row appears, allowing you to track the progress of the deployment you just performed.

Revision #1
