

# Updates

The **Updates** module allows you to **manage and track the status of software updates** on computers in the fleet. It ensures that all machines are up to date with the latest security patches, software updates, and new operating system versions.

## Key Features:

- **Check entity compliance:** Analyzes machine compliance rates to identify which machines are up to date or require updates.
- **Manage non-compliance alerts:** Displays missing updates and non-compliant machines.
- **Deploy updates:** Automatically applies required updates to affected machines.
- **Manage update lists:** Allows you to administer and organize available updates for the IT infrastructure.
- **Track compliance rates:** Provides statistics on the number of compliant machines, those that are overdue, or those requiring action.

## What can you find in the Updates interface?

The interface features several key sections:

- **Entity Compliance:** Displays the compliance rate of machines by entity (e.g., *Siveo Medulla*).
- **Manage update lists:** Manage available updates and those awaiting installation.
- **Update Status:** Number of missing updates, number of non-compliant machines, and total number of affected computers.
- **Search and Filter:** Ability to search for specific entities or filter by compliance rate.

## Where can I find the Updates module?

The **Updates** module is accessible from the **main menu**, under the *Updates* tab.

- Click **Updates** to view the status of machines and review non-compliance alerts.
- Go to **Manage Update Lists** to organize and manage available updates.

- Check **Entity Compliance** to view the update rate of machines and detect any anomalies.

To learn more or access advanced features, you can view the supplementary documentation by clicking **Updates**
