

# Groups

Centralised and simplified user management module **Groups** allows you to organize users by function, service, or any other relevant criteria, for more fluid permissions and configurations management. It is an ideal solution to apply mass settings while ensuring customization for each group.

Liste des groupes

Gestion des groupes 1 à 2 - Total 2

Groupes	Commentaires	Actions
 GroupeTest1 (3)	GroupeTest	 / 
 MedullaUsers (2)	Can be deleted once other groups have been created	 / 

## Main features

### Establishment and management of groups

- Create user groups according to specific criteria: function, department, location, etc.
- Each group can group multiple users with similar needs.

### Set permissions

- Set global permissions for each group: extended rights for administrators, or restricted rights for standard users.
- Manage access to different modules or features depending on the role of the group.

### Application of configurations

- Deploy configurations and settings across a group of users, making large-scale management easier.
- Change the configurations of a group and apply them quickly without having to intervene individually on each user.

To learn more or to access advanced features, you can consult the additional documentation by clicking **Groups**.
