

The dashboard

Presentation of the dashboard The Medulla dashboard provides a clear and detailed overview of the state of your computer fleet. Designed to provide you with a quick and accurate overview, it brings together essential information and performance indicators to help you make informed decisions in real time.

Fully customizable, this dashboard allows you to adapt its content to your priorities by adding or removing widgets according to your needs.

State of machinery

The dashboard displays in real time the status of machines, whether online, offline or encounter specific problems such as failed deployments or non-conformities.

Recent alerts

It allows visualization of critical and non-critical alerts, such as:

- Deployment problems
- Pending updates
- Machines not available
- Failed backups

Each alert can be viewed and managed directly from this section.

History of actions and events

Detailed monitoring of the actions carried out on the system, including:

- Deployments completed
- Saved
- Configuration changes
- Remote access

Follow-up of updates

The dashboard allows you to track the status of current updates, with the ability to manage them easily: install immediately or plan for later.

Resource management

You have direct access to the use of system resources, such as:

- bandwidth
- Available storage space
- Management server performance

Customizing the dashboard

With customization of widgets, you can track key information such as:

- The number of teleworking machines
- Machine conformity
- Progress in deployments

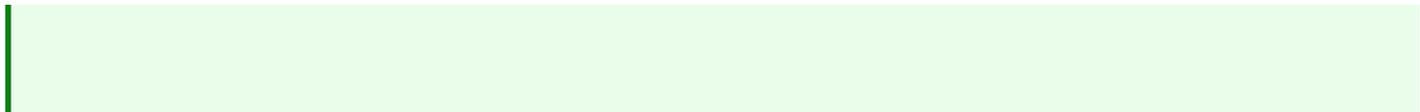

Widgets are easily reorganizable by simply dragging down, thus providing an experience entirely tailored to your needs.

Scoreboard interactivity

The dashboard is interactive, allowing you to:

- Click on an alert to see the details and answer them directly.
- Click a machine to access its information and perform actions, such as software deployment.
- Click on an update to install immediately or plan it according to your schedule.

Benefits

- Quick and reactive overview of incidents, allowing you to react immediately.
 - Direct access to critical actions, without having to navigate in complex menus.
 - Time savings through centralized management and constantly updated information.
-
