

# Users

[user.png](#)

Centralized, secure and clear management Easily manage all your user accounts in Medulla, with complete control of roles, permissions, and access. The User module offers an intuitive interface to manage your user base, monitor their actions, and enhance the overall security of your environment.

## Key Features

[image.png](#)

### User creation and management

- Add, edit or delete accounts directly from the Medulla interface.
- Match each user to one or more **groups** to apply specific accesses.

### Roles and permissions

- Define specific roles: **standard user, technician, administrator**
- Manage permissions with finesse: each role determines what the user can see or do in the interface.

### User groups

- Organize your users in groups according to their functions or services.
- Apply group specific configurations, applications and restrictions

### Monitoring of activities

- All user actions are recorded in the **audit logs**.
- Follow who installed what, modified what, and when.

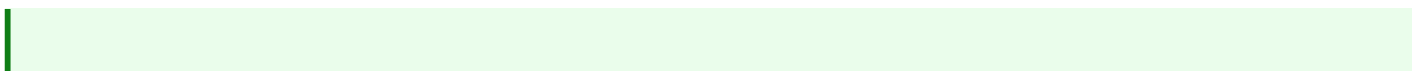

### Account security

#### **Strong authentication**

Strengthen access security with dual authentication. Only authorized users can connect to the interface

#### **Secure remote access**

Users can connect remotely via tunnel [Secure SSH](#), perfect for telework or nomadic teams.

To learn more or to access advanced features, you can consult the additional documentation by clicking **Users**
