

# Track backups

Tracking real-time backups allows you to check that all tasks have been properly executed.

The screenshot shows the Medulla web interface. The top navigation bar includes the Medulla logo and various menu items: Dashboard, Kiosk, Utilisateurs, Groupes, Ordinateurs, Imaging, Packages, Audit, Mises à jour, Sauvegarde (highlighted), Historique, and Admin. Below the navigation bar, the breadcrumb trail reads 'wva.medulla-tech.io > Page principale > Sauvegarde > Revue'. The main content area is titled 'Revue' and contains three sections: 'Statistiques globales' with a table showing disk space usage, 'Dernières activités' with a table of backup tasks, and 'Logs' with a table of messages.

Espace disque utilisé par tous les clients		Taille
All computers		0

Id	Nom	Date de sauvegarde	État	Détails	Durée H:M:S	Taille
----	-----	--------------------	------	---------	-------------	--------

Message	Heure
---------	-------

## Access:

Main menu > **Reviews**

Menu **Logs** → Check the technical messages and their time of occurrence for each backup task.

In case of error:

- See **detailed logs**.
- Identify the cause (network connection, insufficient disk space...).
- Set up alerts to anticipate problems.
