

Create a cluster

Creating a **cluster** allows you to better organize your relays according to your needs (for example, separating testing from production). This is exactly the same form as the edit form.

The screenshot shows the 'Nouveau cluster' form in an Admin interface. On the left is a sidebar menu with the following items: Admin, Liste des relais, Liste des clusters, Nouveau cluster (highlighted), Liste des règles, Gestion des entités, Ajout d'un utilisateur, Clients OIDC, Nouveau client OIDC, and Journaux serveur. The main form area is titled 'Nouveau cluster' and contains the following fields: 'Nom du cluster' (text input), 'Description' (text input), and two list boxes. The left list box is titled 'Relais en dehors du cluster' and contains 'int' and 'int-ars01'. The right list box is titled 'Relais à l'intérieur du cluster' and is empty. Between the two list boxes are green arrows: a right-pointing arrow from the left box to the right box, and a left-pointing arrow from the right box to the left box. At the bottom of the form is a 'Valider' button.

Steps:

1. Click **“New Cluster”** in the menu.
2. Click the **“Add a new cluster”** button .
3. Fill in the fields:
 - **Clustername** (e.g., "TestCluster")
 - **Description** (e.g., "Cluster for test relays")
4. Select the relays you want to associate with it (a list will appear).
5. Click **“Confirm”** to save.

Revision #1
