

Entity Compliance Tracking

Update compliance is an indicator of the health of your IT infrastructure. The higher it is, the more protected and aligned your systems are.

Best practices:

- Regularly check entities with a compliance rate below 100%
- Analyze the causes of non-compliant machines (deployment errors, missed reboots, software conflicts, etc.)
- Launch a new targeted deployment from the affected entity

Managing updates is not just about fixing issues. It is a proactive, continuous, and strategic process. With the compliance tools offered by the platform, you can:

- Quickly view at-risk devices
- Intelligently deploy the necessary patches
- Minimize the impact on the network and users
- Maintain a high level of security across your infrastructure
