

Medulla Kiosk

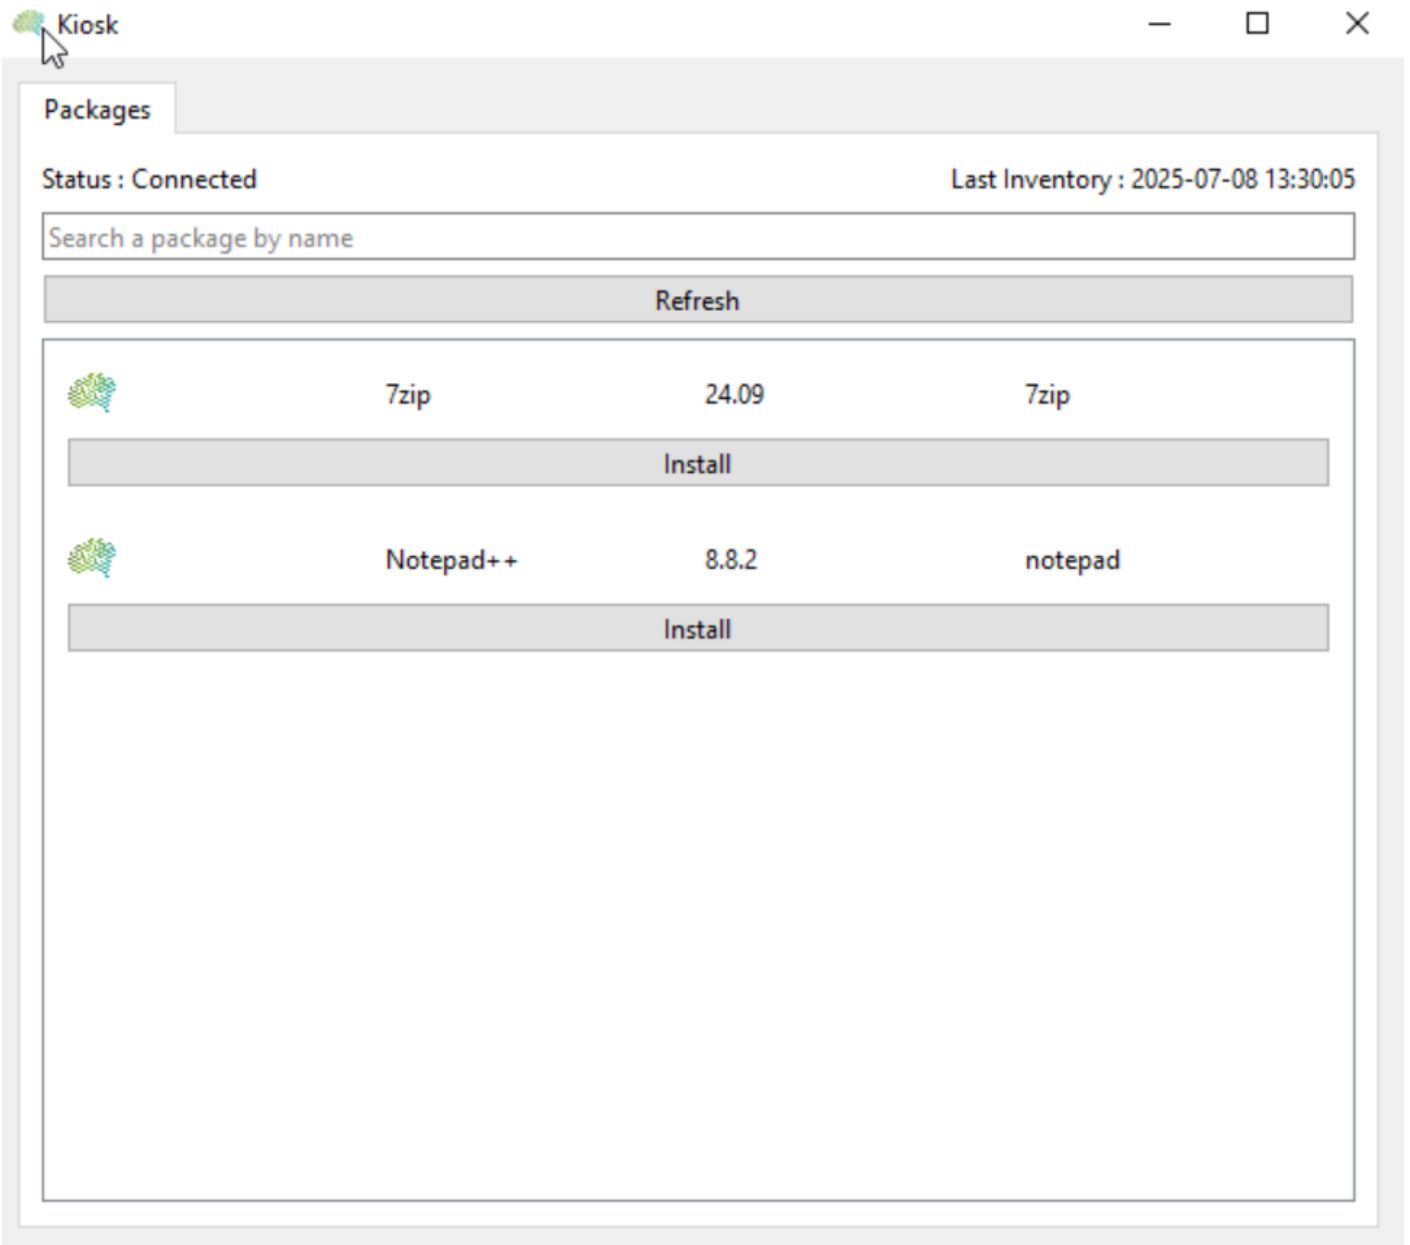

Once profiles have been created in the Medulla interface, users whose computers are connected to Medulla will see an icon representing the Medulla logo in their system tray:

Double-click the icon to open the kiosk and view the applications that the Medulla administrator(s) have made available:

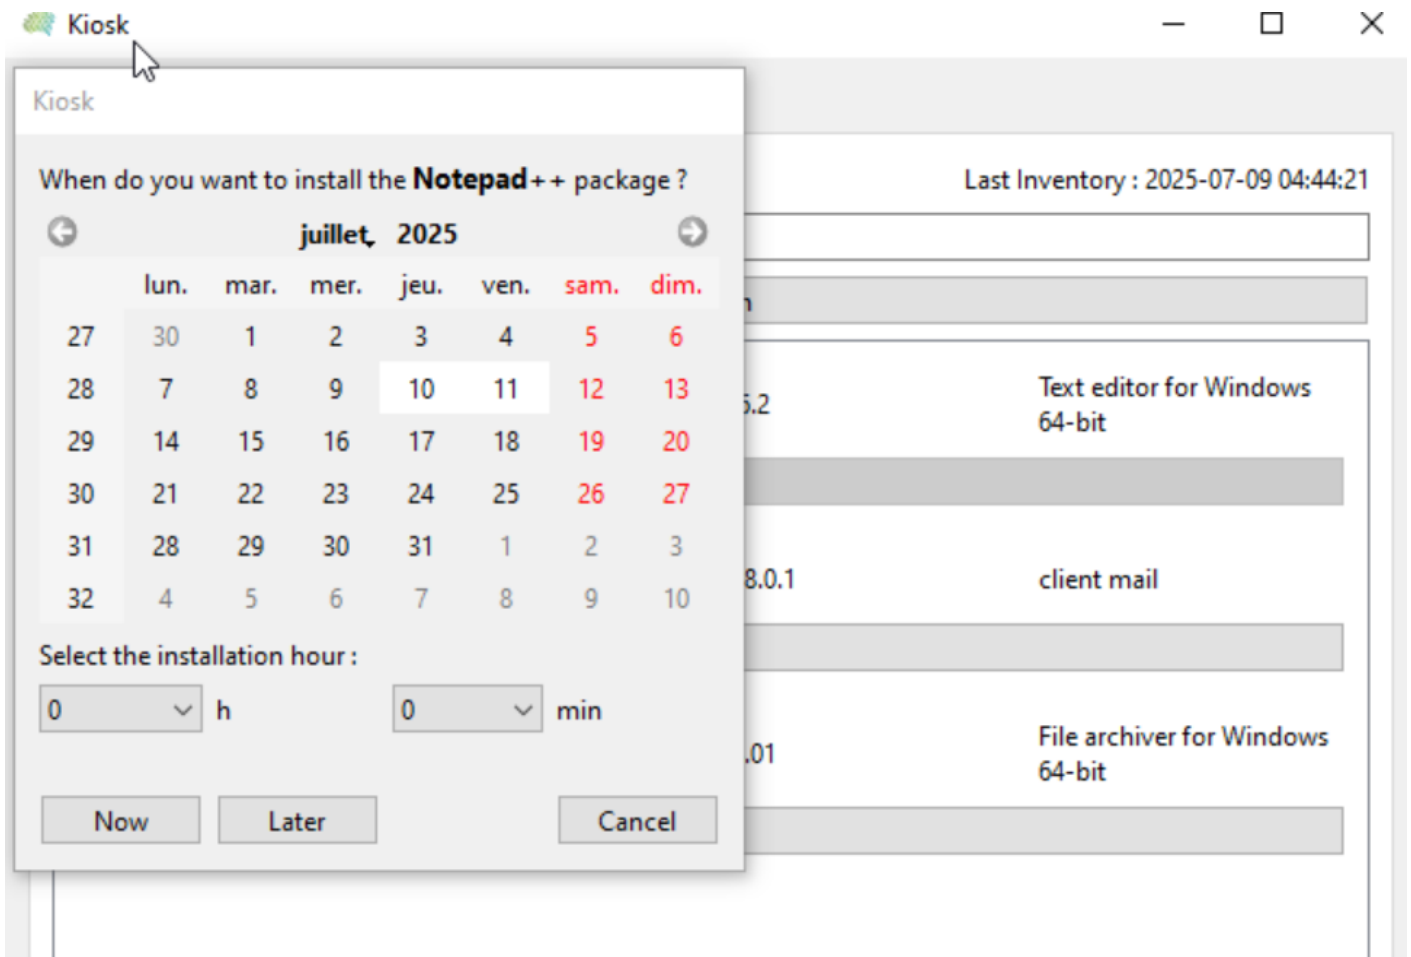

You can also right-click and then click the **"Open"** button:

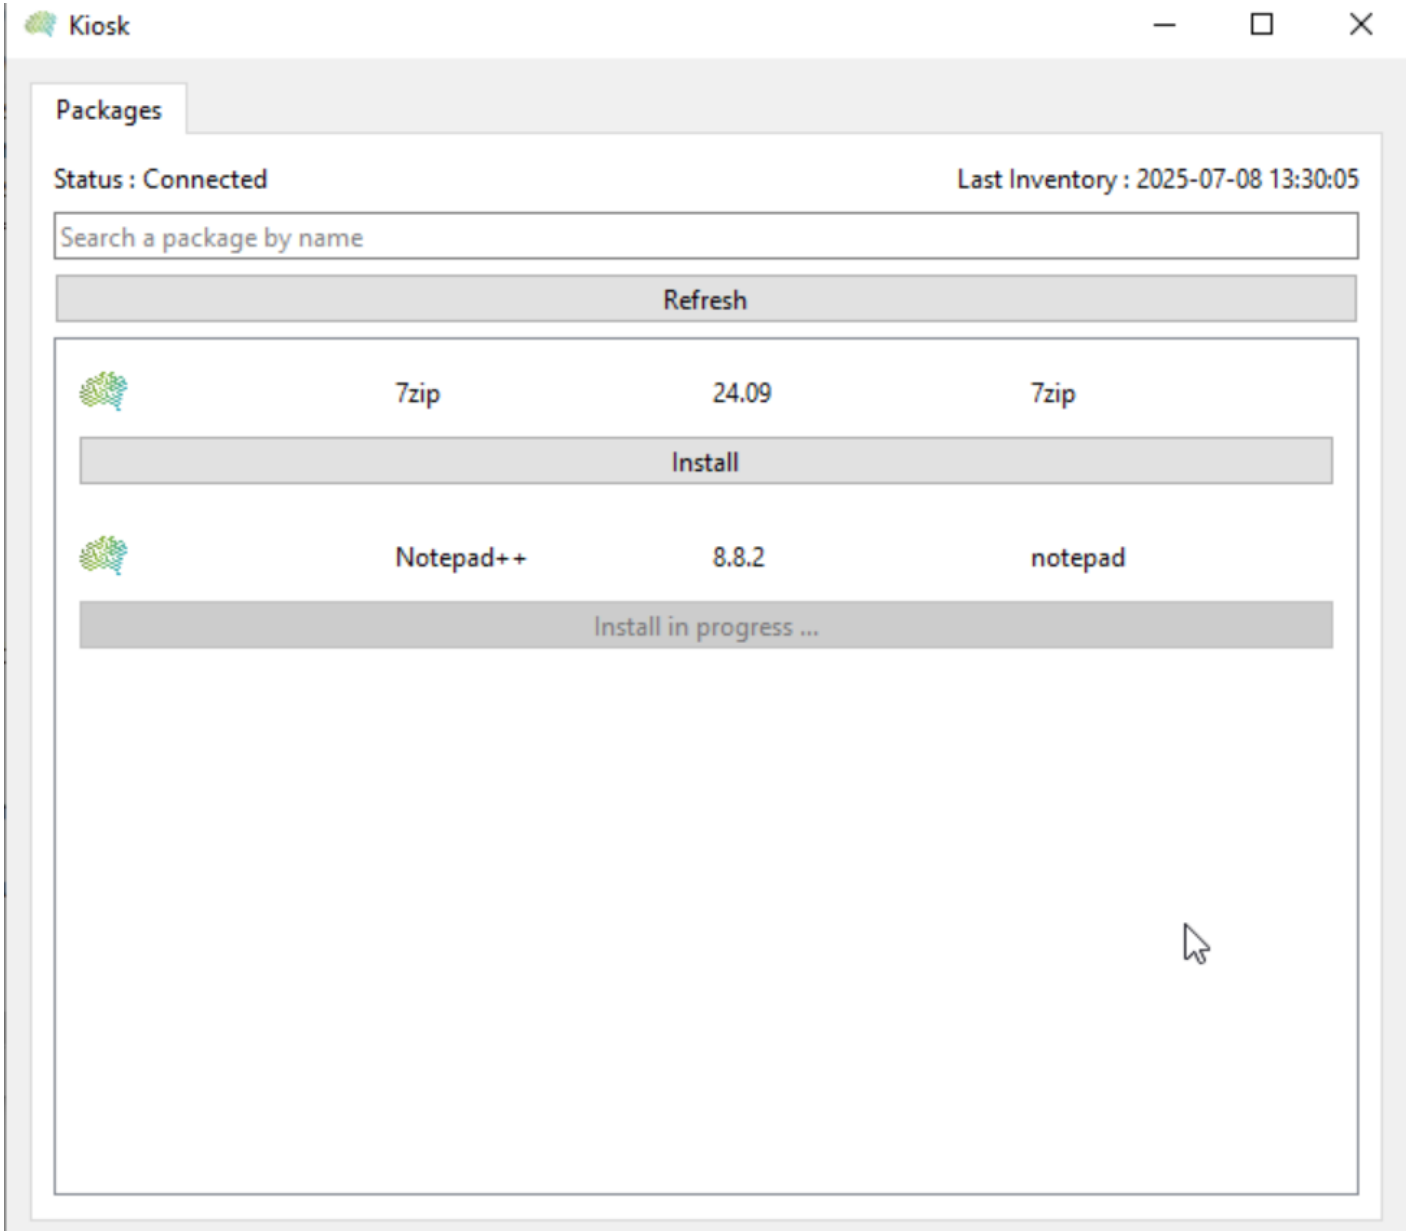

Next, the user simply selects the relevant package and clicks the **"Install"** button.

The user then has several options available:

You can schedule a deployment date and time, then click the "**Later**" button (e.g., Today at 5 p.m.); at that time, the deployment will be carried out on the date and time scheduled by the user.

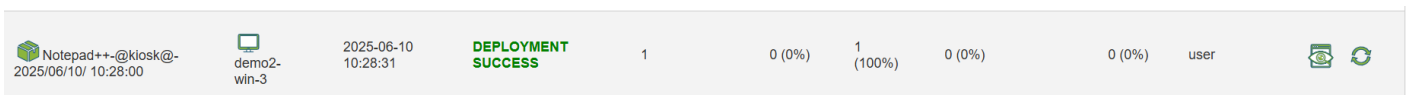

Or click "**Now**" to start the deployment immediately.

The user will then see the **"Install"** button change to **"Install in Progress. "**

Once the **"Install"** action has been clicked, the Medulla agent will send the installation request to the Medulla server, and the server will handle the installation as a normal deployment.

In the Medulla console, the administrator will find the deployment in the Audit tab with the command name followed by @Kiosk@, which identifies deployments via the kiosk.

The user will see their kiosk window change to display the **"Launch"** button and the **"Delete"** button, which allows them to remove the program.
